IOWA UTILITIES BOARD

This data reflects events such as:

- Investment booked in 2013 on projects begun in a previous reporting period.
- Investment booked in 2013 on projects continuing into the next reporting period.
- Changes in availability lag investment due to DSL configuration changes not fully tested and accepted into inventory until the next reporting period.

Percentage differences can be unrelated to plant construction. A change in availability (negative or positive) could be due to, a refinement of input data, a change in total Living Units, or a changes in loop qualification rule sets. In a small wire center, a large percentage change can involve a small set of customers formerly miscategorized.

This is the same data as was used to create the maps.
