IOWA UTILITIES BOARD  
E-22276**

Dear Iowa Utilities Board Representative,

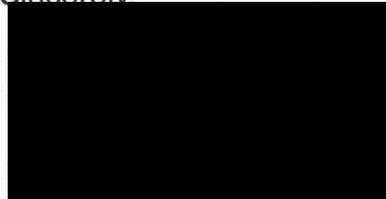

This letter is in regards to the Turtle Creek Wind Farm project by EDP Renewables in Mitchell county. We live and farm directly across the road from the proposed route for the 345 kV transmission lines. We are adamantly opposed to the lines being placed so close to our farm. Our home sits very close to the road and we fear the transmission lines will negatively affect our property value and possibly negatively affect our health with such close placement to our residence. In addition, having these transmission lines so close to our farm property will also affect the ability to have our crops properly aerial sprayed when needed. We sincerely hope an alternate route can be found.

We have included a map with our home marked by an "x".

We will attend the informational meeting in Stacyville on April 29th.

Thank you for your attention to this matter.

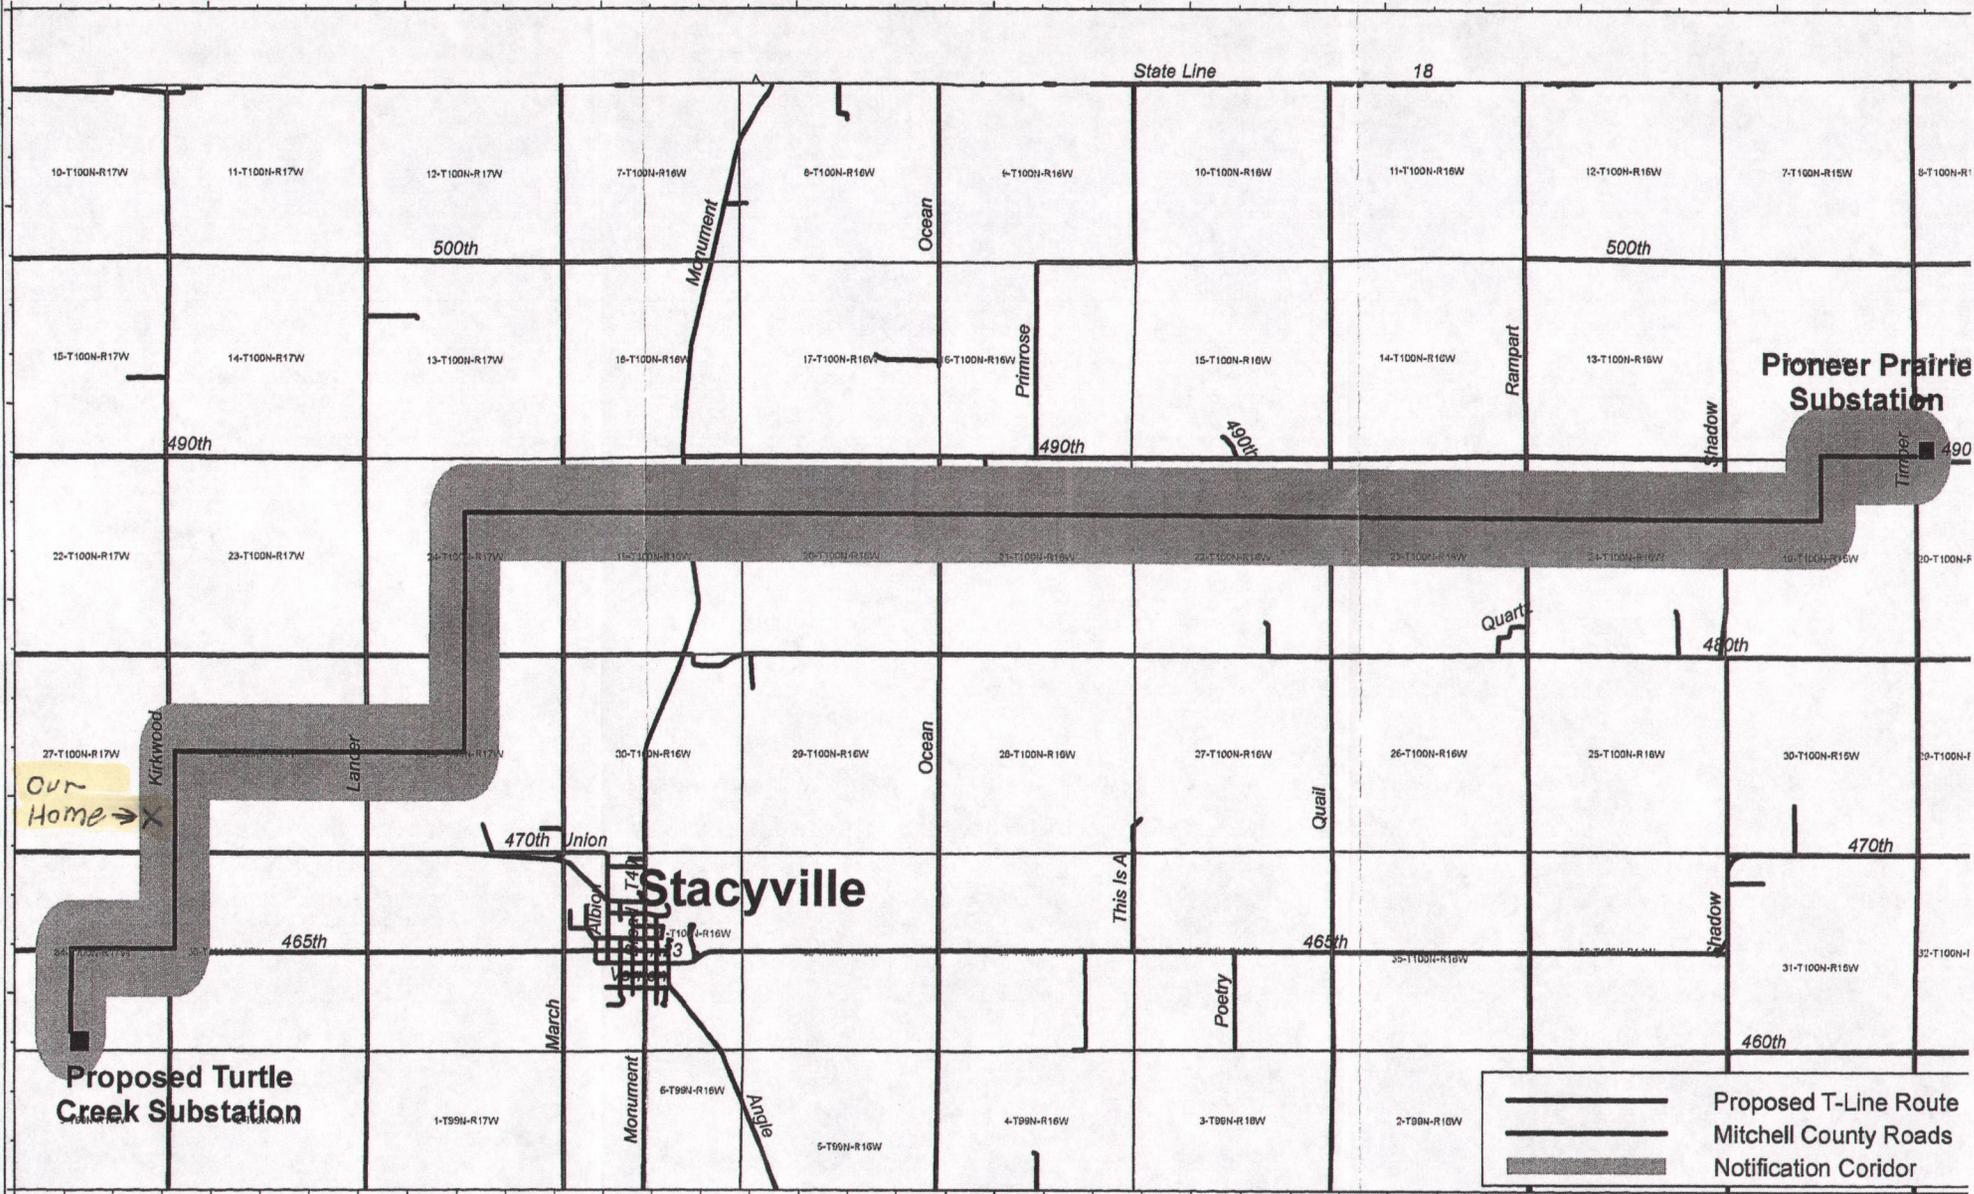

Sincerely

Dave and LeAnne Lenz
