IOWA UTILITIES BOARD

Please Approve the Rock Island Clean Line Transmission Line Project

Honorable Chair and Board Members:

I am writing to support the Rock Island Clean Line, which is critical infrastructure for our state, region, and nation. The Rock Island Clean Line is a 500-mile transmission line that will strengthen our regional electric grid and provide our region and nation with competitively priced clean energy. This project, and the more than 3,500 megawatts of new wind farms it will enable, will create thousands of jobs for Iowans benefiting Iowa families and communities.

The United States and Northwest Iowa have some of the best wind resources in the world, and our nation needs new and cost-effective clean energy resources. Unfortunately, the transmission infrastructure does not currently exist to connect these resources to communities and cities across our region that have a strong demand for renewable energy.

New wind projects that could provide energy for millions of homes can't move forward due to a lack of sufficient power lines. Clean Line Energy is developing one solution, the Rock Island Clean Line, to address that problem. Spanning Iowa and Illinois, the project will collect and deliver enough energy from new wind projects in northwest Iowa and the surrounding region to meet the annual needs of 1.4 million homes.

Furthermore, in addition to providing needed energy, the estimated economic activity from this project includes about \$7 billion of direct investment in wind farms, \$2 billion of transmission line investment, and major job creation in construction and related manufacturing across Iowa. I support this project and the regulatory approvals required for the project to move forward.

Sincerely:
